

PROFESSIONAL SUMMARY

Results-driven **Senior Game Developer** with **4.5+ years** of professional industry experience architecting high-performance 2D/3D games, virtual reality medical simulations, and custom hardware motion-control systems. Highly proficient in Unity (URP, Physics, Cinemachine), clean decoupled C# architecture, and Meta Quest 2/3/3S deployment. Recognized for rapid gameplay prototyping, optimizing memory/draw calls for locked high frame rates, and delivering immersive interactive applications from concept to production.

PROFESSIONAL EXPERIENCE

**Senior Game Developer — Equidor Medtech** | Bengaluru, India April 2024 – Present

- Lead gameplay programming for cross-platform 2D/3D titles and interactive VR experiences, driving core loops from whitebox to release with sustained 60+ FPS stability.
- Architect specialized applications interfacing directly with proprietary motion-based sensor hardware and custom controllers, cutting input latency across platforms.
- Champion clean engineering workflows, sprint planning, peer code reviews, profiling, and memory optimization across devices, minimizing crashes and draw calls.

**Associate Software Developer — Cyclops Medtech** | Bengaluru, India Jan 2022 – March 2024 (2 yrs 3 mos)

- Engineered, optimized, and shipped medical-grade diagnostic VR applications targeting Meta Quest 2 (Android/XR Toolkit), consistently sustaining 72/90 FPS.
- Analyzed telemetry data, diagnostic sensor logs, and system crash dumps to identify technical bottlenecks, accelerate bug resolution, and maintain peak stability.
- Collaborated closely with product owners and clinicians to translate complex clinical protocols into intuitive, gamified patient tests across multiple hardware iterations.

TECHNICAL SKILLS & ARSENAL

**GAME DEV & ENGINES**

Unity (2D/3D), Universal Render Pipeline (URP), 2D/3D Physics, Cinemachine, UI Toolkit & Canvas, Mecanim Animation, Particle Systems.

**VR & HARDWARE SYSTEMS**

Meta Quest 2 / 3 / 3S, XR Interaction Toolkit, Motion Sensors, Spatial 6DoF Tracking, Custom Controllers, Medical-Grade VR, Telemetry.

**LANGUAGES & ARCHITECTURE**

C# (.NET), Design Patterns, State Machines (FSM), Object Pooling, Observer/Events, Data Structures, Decoupled Clean Architecture.

**TOOLS & 3D CREATION**

Blender 3D, Photoshop, Git / GitLab / GitHub, Unity Profiler, Memory Optimization, Draw Call Batching, JIRA & Agile.

FEATURED PRODUCTION & PORTFOLIO PROJECTS

**Animal Swipe — Mobile Gesture & Reflex Arcade** [Demo / Code ↗](#) Unity C# Touch Gestures Mobile

- Engineered responsive multi-touch swipe mechanics with gesture recognition, combo scoring, and object pooling tailored for locked 60 FPS mobile performance.

**Asteroid Run — 3D Cosmic Physics Puzzle** [Google Play ↗](#) Unity 3D C# Gravity Physics Android

- Published on Google Play. Architected 3D orbital gravity mechanics, slingshot planet trajectory physics, and celestial body merging loops.

**Teddy Dispatcher — 3D Physics & Queue Simulation** [Demo / Code ↗](#) Unity 3D C# FSM State Machine Physics

- Architected an event-driven dispatch loop using State Machines (FSM) to manage dynamic entity routing, sorting queues, and real-time rigid-body interactions.

**Walk & Dodge — 3D Obstacle Course Platformer** [Demo / Code ↗](#) Unity 3D C# Physics Cinemachine

- Engineered 3D obstacle avoidance with dynamic hazards, responsive character physics, Cinemachine tracking, and zero-allocation object pooling locking 60 FPS.

EDUCATION, CREDENTIALS & LANGUAGES

**DEGREE**

BCA in Game & Mobile App Development

CMR University, Bangalore

2019 – 2022

**CERTIFICATION**

VR Development Fundamentals in Unity

Udemy Professional Credential

2022

**SPOKEN LANGUAGES**

English (Professional)

Hindi (Fluent) • Bengali (Native)
